N=number of parts to be written If using the JOIN command, this value should be replaced by the number of diskettes used to perform the join. This is used for file joins COPY /B part.1+part.2+part.3. /B outfile This will perform a binary append of all parts into the output file. If using the JOIN command, this value should be replaced by the number of diskettes used to perform the join. This is used for file joins JOINING THE FILES BACK TOGETHER! This can be accomplished with a very simple command: COPY /B part.1+part.2+part.3. /B outfile This will perform a binary append of all parts into the output file. This will use the same input files as the one-part join command, and use the number of diskettes to indicate how many parts of the same file to join together. Example: LENGTH=3 COPY /B part.1+part.2+part.3. /B outfile If using the JOIN command, this value should be replaced by the number of diskettes used to perform the join. This is used for file joins COMMANDS ===== D:\>SPLIT file.zip /L:4100:COPY /B part1+part2+part3. /B outfile Computers can often have problems when dealing with excessively large files. Splitting files into multiple parts allows more of them to be downloaded at once. Each part can be downloaded separately. COPY: COPY [drive:][path]source:[file\_name][destination] [drive:][path]source:[file\_name] For example: Drive: C: Source: D:\largefile.zip Destination: D:\largefile.zip.1 This command will copy all the information that is in the source file to the destination file. The file name or location may be separated by the ':' character. If the file is placed on a network share, you can add '\ ' to make the file accessible directly from the network. If the file is placed on a floppy disk, you must add 'D:' to the source file and destination file names. 1d6a3396d6

## File Splitter Activation Key

This program is written in Visual Basic 3.0. It is coded in Microsoft Visual Basic 3.0 and Microsoft Windows for PC and MS-DOS (but can be easily adjusted to run under Windows 95/98/Me). This program does NOT require an external utility, because this program was written to do the exact same function as the existing utility. The program was designed to be very simple and easy to use and will not require the user to have any kind of knowledge of the operating system. When a file is selected by the user, File Splitter will then check the disk on which the file is stored. If it is a floppy disk, then File Splitter will ask the user whether the disk should be split or not. The disk is then checked to see if it has been split or not. If the disk has been split, then the program will ask the user to specify the size of the diskettes onto which the files will be split. The program then splits the file into the number of partitions specified by the user. If there are partitions already on the disk, File Splitter will split the file into the partitions specified by the user. Otherwise, if there are no partitions on the disk, File Splitter will create the partitions for the file. The program can also be used to split a file onto several diskettes and then copy the files to a single diskette. At the end, the program will prompt the user to specify the name of the disk onto which the file will be copied. All files will then be copied to the specified disk. While File Splitter is not as powerful as some other utilities, it is effective in splitting files into a number of smaller sections for users who need to split files into smaller parts and then copy them back to one large file. Supported Platforms: This program was written to run under Microsoft Windows 3.x, Microsoft Windows 95, Microsoft Windows 98, Microsoft Windows Me, and Microsoft Windows 2000. It can run in a virtual machine under either Windows 95 or Windows 98 as well as under Windows 2000. This application was designed to be compatible with all versions of Microsoft DOS. Versions of DOS before Version 5.0 do not have a function called SPLIT, which was written into Version 5.0. Versions of DOS after Version 5.0 can run this program, as well as any other program that does not have an included function that uses the SPLIT function. Credits:
