This device is based on a dual-chip VCSEL design where the VCSELs are built on different substrates using the emerging ultra-high speed CMOS compatible technology. This platform is offered in four different configurations allowing the customer to select the proper device for their application. R-M Chain features high power handling, long-term reliability, and is ready for the harsh data center environment. R-M Chain is available with either an optical transmitter or receiver on board for the data center that provides high data rates with the main benefits of: 1. Low latency (under the 100ns range) 2. Insensitive to changes in temperature 3. Low power and low jitter, making it ideal for applications such as Gigabit Ethernet. The Embedded Magician® features a ready-to-go FPGA for direct programming, simulation and integration. It takes less than 10 minutes to setup and configure an FPGA to perform your desired microcontroller or application processor function. The Magician is highly configurable and supports Altera and Xilinx devices. The Magician FPGA provides: Easy-to-use, powerful architecture Virtual configuration: Rapid prototyping and configuration of your core logic functions. DSP and data communication features. Low power, extremely low cost and high performance platform The Embedded Magician® uses the compact, low-power, highly-efficient Cyclone® F
