Some people are pretty big fans of cloud storage, mostly to store their data online for convenient access. But there's a problem with the big storage space available with online services — there are limits! And considering that the average user's internet speed is only in the high 40's Mbps or Kbps, this is really a pain. How can users choose between the reliable online storage options available and the affordable local ones? By using Netgear's Nighthawk X10 router, users can utilize their own local network drive. This means that users can connect with their network drives and use them to store all their data in the cloud or locally. These drives can also be used to back up important documents using a cloud storage solution. If your Internet connection is a bit slower than 40 Mbps or Kbps and you still need to use a decent sized drive, Netgear's Nighthawk X10 router will be able to help you out. Using the Nighthawk X10 in conjunction with a local backup drive, users can have a local, reliable network drive to store files. Users can also

There is a popular misconception that controlling your Internet traffic is a complicated task, as it simply involves gaining access to your local network and configuring your router. This task can be quite simple, but it requires setting up your router properly. The main purpose of routers is to enable your computer to reach the internet using a static IP address. What is a static IP? It is an IP address that is associated with a specific device. The IP address does not change over time but as the device is connected or disconnected, the IP address of the device changes. To prevent your device from being associated with multiple IP addresses, the router is in charge of binding a static IP to a specific MAC address. To do so, you need to connect the router to the internet, then disconnect it from the internet, and then configure the router using your MAC address in the router's web interface or using your router's configuration software. That's how you can make sure that your router's IP address is being associated with one device. With that said, let's look at some basic principles of Internet connectivity, the most popular being static IP addresses. Let's start with the simple case: You need to connect your PC to the internet, you've got a Wi-Fi and a cable internet modem and you need to connect your computer using the modem. In this case
