BANGKOK -- Thai anti-government protesters have been given suspended jail sentences of nearly three years each, as their uprising begins to settle down with an amnesty law and a revamped constitution. More than 9,000 people were arrested in a sweep by security forces after anti-government protesters stormed the parliament building and several other government buildings in Bangkok last May. By early this year, about 2,000 of them had been convicted and sentenced to prison for between three and eight years, as the junta tightened its grip on the nation. The remaining cases were heard late last month with the maximum sentences of three years upheld in some cases while suspended in others. It was the first time in years that an amnesty law, the Council for National Security Bill, has been enacted in Thailand. The bills now allow some of the protesters convicted and sentenced in late 2012 to come out of jail for lack of evidence and file for amnesty. Other protesters who have accepted a suspended jail sentence will also be freed. The bill also gives amnesty to the civilians

injured or tortured by police during the protests. But the junta wants to avoid more bloodshed and has rejected any moves that go against their authority. It has warned any movements that might spark public disorder and says that demonstrations must be peaceful. Prime Minister Prayuth Chan-ocha has since become the face of a conservative military government that has ruled the country since a May 2014 coup ousted an elected government.

Q: What are the pros and cons of the motorbike muffler vs the 'rear door' exhaust system? The specs and price of the 'back box' (rear door system) muffler and the 'front box' (motorbike system) are identical, and neither are really cheaper or more expensive. Basically, is the muffler the better option, a cost-saving only, or the only choice? A: The muffler is a much better solution. The benefit of the box is that you don't have to mess with welding. You just need the pipe and a muffler. Besides, the box will have a thermal mass that will absorb a lot of heat and will make the engine work better. A: In my experience, the "rear exhaust" style
