Field of the Invention The present invention is directed to a method for digitizing imaging data. 2. Description of the Prior Art Computerized medical diagnosis systems, which are used for example in the production of three-dimensional image data of x-ray images, for example, generally comprise a control unit, a x-ray radiographic device and a computer. The x-ray radiographic device generates x-ray radiation. The x-ray radiation passes through the body of a patient and impacts a film or directly a digital detector, in order to generate an image of the patient. The control unit is used to control the x-ray radiographic device and includes a monitor connected to the digital detector. The control unit is also coupled to a digital processing unit, which receives image data from the digital detector and generates a reconstructed image from it. However, a disadvantage in the existing systems is that the reconstruction is carried out only if the x-ray radiographic device is already up and running. Only with a constant x-ray radiation source, e.g. x-ray generator, which operates constantly and regularly for the duration of the examination, is it possible to obtain sufficient image information for reconstruction. Therefore, a requirement exists for making a reconstruction of the image possible in spite of a fluctuating x-ray radiation source, which is capable of generating a fluctuating x-ray radiation.Reduced grip strength and increased fatigue in lower limb amputees. As long as you have sufficient space on your hard drive and plenty of room on your monitor, there's no reason to limit the number of characters you use. Running the file on my MacBook Pro, it was able to open 8,000 characters. Maybe yours will handle more, but it's more than adequate for anything you might want to do. I don't need a gaming rig. The software also works on a smartphone, tablet or any other computing device that runs Windows. You don't need to limit yourself to Windows. I tested this file
