===== 1. VTree is a command line utility that is designed to be run from the command line. 2. It will parse a file for the filenames and folder names that are needed for the report. 3. VTree reports on the files in the directories specified on the command line. 4. The directory can be sorted using the '-s' option, and/or filtered using '-f', '-e' or '-d'. 5. The data that is reported is File Sizes, Total Size, Total Bytes, Total Bytes (Per File), Total Harddiskspace, Total Sparse Diskspace, Total Disk Usage, Disk Usage Per File. 6. It also reports on the folders, whether they are directories, files, or both. 7. You can also report the size of each folder in MB. 8. '-r' lets you report each folder's directory with its files on the command line. 9. You can also sort the directory by size (smallest to largest) or by date created. 10. You can also specify the data format. 11. You can also specify the directory to start the scan from. 12. You can also specify the directory to report from. 13. You can also report the directory and files and subfolders and the sizes of those files and folder and subfolders. 14. VTree can also be run on Windows 95/98/ME/NT/2000/XP by executing the.exe with /v for a verbose report. 15. VTree can also be executed on Linux by executing the.sh file with the /v switch. 16. Using multiple subfolders at once is the same as nested subfolders. 17. If it does not find a subfolder, it will not report anything for it. 18. There are other switches on the command line, for example: "-i", "--ignoreHidden", "--ignoreIcon", "--ignoreNonEphemeral", "--ignoreR", "--ignoreReadOnly", and "--ignoreSymLink". More will come as time progresses. 19. If you run it without arguments, it will open up a console window and let you edit the command line if you wish. Features: ===== 1. VTree is a FREE, easy-to-use Windows Explorer plugin that can be used to quickly and easily monitor the space usage of any folder. VTree uses a graph visualization of the space usage of the folders and sub-folders to provide an immediate and intuitive presentation of the results. Features: Not all sub-folders are displayed. In order to display all sub-folders, VTree can be started by specifying that it should recurse through all sub-folders. Recursion is also supported by configuring the Recurse option on the Folder Options dialog. Preset

Folder Colors: The preset colors are clearly identified and assigned to the appropriate type of usage or exception. Quota Usage: Discrete and continuous color allocations are available. Quota Usage is not a listing of all folders, but a relative indicator of the space usage of the parent folder.

Foreground/Background Colors: Different colors can be assigned to folders and sub-folders for different usage levels, exceptions or unusual conditions. Save Samples: By default, VTree saves a copy of each graph as a picture (.tiff or .jpg). The .jpg format is the preferred one, as it can be loaded into most desktop publishing (DTP) programs, such as Photoshop. Exporting: Export to Excel is possible with the "Save Graph Picture" option. Main Screen: The main screen is the default one. You can easily configure the main screen to adjust to your preferred look and feel. More Examples: You can import reports created by other users. These reports are stored in the same folder as VTree.cfg. Examples are also provided.
