tasks such as deploying, deploying directly, and running, to your choice of macros. 2edc1e01e8

The CrmSolutionCommandLineHelper class is used to define the command line properties for use with the [CrmService] class, which handles the cmdlet interaction. For each cmdlet that is provided in the /features/commandline/ folder, there will be a class within the folder called CrmSolutionCommandLineHelper. This cmdlet will be used to describe all of the properties that are needed to pass to the [CrmService] cmdlet when this is used in a process that does not have a configuration file, such as the method for creating new organizations. > [!NOTE] > - This cmdlet is intended for use by developers building new cmdlets for the Managed Metadata Service. > - All commands should be invoked with the

[CrmService] cmdlet. > - This cmdlet should not be used by customers building their own cmdlets for the Managed Metadata Service. > - This cmdlet is primarily used by the Organization service to pass properties to the [CrmService] cmdlet when > this is used in a process that does not have a configuration file. > - This cmdlet will be executed for every organization that has the Managed Metadata Service enabled. > ## ADO.NET Command Line Helper Description: The ADO.NET CommandLineHelper class is used to define the cmdlet properties for use with the [CrmService] class, which handles the cmdlet interaction. For each cmdlet that is provided in the /features/commandline/ folder, there will be a class within the folder called ADO.NET CommandLineHelper. This cmdlet will be

used to describe all of the properties that are needed to pass to the [CrmService] cmdlet when this is used in a process that does not have a configuration file, such as the method for creating new organizations. > [!NOTE] > - This cmdlet is intended for use by developers building
